

Simplicity, strength, durability, innovation.

SARGENT®

Raising the Bar of Excellence.

A **New** Innovation in Life Safety

SARGuide™ BENEFITS

- Highly visible in smoke and other low visibility conditions
- Three to five times greater visibility than any other light source
- Can be easily spotted from considerable distances
- Green/blue color conducive to night vision
- No filaments to break or fail
- Immune to vibration or shock
- Extremely durable construction. Continues to operate even if pierced
- Intuitive operation. Integral "EXIT" signage guides users directly to the means of egress

SARGuide

SARGENT, partnering with E-Lite Technologies, Inc.®, the world-wide leader in electroluminescent technology, introduces SARGuide. The SARGuide™ exit device contains an illuminated touchpad to enhance the visibility of exit locations in dark or smoke-filled passages. As a supplement to existing codes for egress lighting, SARGuide effectively improves the safety of any public building!

SARGuide addresses the increasing concern about public egress, particularly in low-visibility conditions. Research shows that in panic conditions, exit signs and locations are missed or go unnoticed. Smoke rises and can quickly block the visibility of standard exit signage. SARGENT exit devices, with the SARGuide feature, are placed lower on the door providing an extended window of opportunity for safe emergency egress.

Specify SARGENT Exit Devices with SARGuide to ensure the highest level of safety and security!

SARGENT Manufacturing has been a leading manufacturer of architectural hardware since the 1800's. In 1995, SARGENT became part of ASSA ABLOY, the world's leading lock group. Since then, SARGENT has focused on manufacturing processes, product quality, and continues to lead the industry in new product introductions and innovations.

SIMPLICITY

- Easy installation!
- Maintenance free design
- Few moving parts – less wear, less maintenance
- Modular construction
- No need to remove device from door for maintenance or keying

STRENGTH & DURABILITY

- Made of finest component materials
- Heavy duty mounting construction
- Built to withstand abusive conditions
- Available options to meet Dade County Protocols and other local hurricane code requirements for high wind load and missile impact*
- 5 year warranty

AESTHETICS

- Clean, simple, aesthetically pleasing design
- “True” architectural hardware finishes consistent with BHMA/ANSI standards
- *Coastal Series* decorative lever trim available

INNOVATION

- Broad offering of electro-mechanical solutions for the most demanding access/egress control applications
- **SARGuard** anti-microbial finish coating offers a new level of protection
- CTL (Center and Top Latching) Vertical Rod Devices offer less bottom rod convenience with true center latching for added security

* Consult factory

SARGuide™ FEATURES

- SARGuide is illuminated utilizing the patented FLATLITE[®] electroluminescent lamp embedded within the LEXAN touch pad insert and base (no exposed components)
- Supplements building exit signs required by code
- UL Listed for use on panic (UL 305) and fire-rated (UL10C) exit devices
- SARGuide can be wired for continuous operation (always on), or can be wired into fire alarm system for operation only when alarm is activated
- Dual voltage: 24 VAC or VDC input from SARGENT (or other) power supply with battery back-up
- Available with mechanical, and many electro-mechanical, exit devices
- Lexan insert is easily field reversible. Specify hand when ordering
- Other verbage available with the lamp product upon request (special order)
- Lamp replacement kit available. Three to four year life under continuous operation. Light life increases with intermittent use. Lamp brightness will degrade over time. Electroluminescence does not degrade over extended periods of non-use
- SARGuide can be used as a stand alone feature or as an integral part of E-Lite Technologies' E-Lume-A-Path™ Egress Path Marking System. E-Lume-A-Path enhances the ability of a person to escape a building by illuminating the path to safety through existing exits. The system will respond to a power outage or fire alarm signal and consists of a strip of FLATLITE electro-luminescent lamp at the floor level that can go down hallways, around corners and stairwells, hundreds of feet in length. It can help supplement currently required Egress equipment such as Exit Signs and Emergency Lights, which may have limited effectiveness when building occupants do not know the location of secondary exits.
