

# SARGENT® Cylinder & Key Control Systems

**Intermediate Control**

## Keso & Keso UL437

SARGENT recommends the new Keso F1, but SARGENT will continue to support original Keso systems.

## XC Series

The SARGENT XC Series is a patented product which incorporates a side pin mechanism working in conjunction with a specially milled key. Available only through authorized SARGENT distributors, XC provides an intermediate level of key control by ensuring that keyblanks are not readily available in the market. Offered in many of SARGENT's standard keyways, XC is readily integrated as a cost effective means of achieving higher security key control in an existing key system.

### Patented Key Control.

Available in Small Format Interchangeable Core.

## Conventional

Cylinders and keys provide a standard level of control in a full range of keyways. Geographically restricted key sections are available.

## 6300 Series Removable Core

The 6300 Series Removable core cylinders and construction cores allow quick change of keying without having to remove the lock from the door or disassemble the knob or lever. Core cylinders are interchangeable with all SARGENT mortise locks, exit devices, cylindrical locks, padlocks and auxiliary locks.

## 7300 Series Interchangeable Core

SARGENT's version of Arrow, BEST and Falcon\* type interchangeable core is offered in two new SARGENT keyways and BEST keyways. These cores are available in many BEST keyways and two SARGENT 7-pin keyways.

\*Arrow, Best and Falcon are registered trademarks.

**Your level of key control is only as good as the system that manages it!**

### Key Wizard™

A software package developed for locksmiths and facility managers to provide detailed key and hardware management information for single or multiple key systems. Software provides tracking of keys, key bearers, key holder locations and door hardware information. The program features easy-to-navigate screens using a format similar to Microsoft® Outlook™.

**SARGENT® Raising the Bar of Excellence!**

## Cylinder & Key Control Systems Defined.

### Absolute Control:

Patented keys in exclusive keyways are virtually impossible to duplicate. Cylinders provide maximum pick and drill resistance (UL437). Cylinders and keys are available only through authorized SARGENT distributors.

### Extra Control:

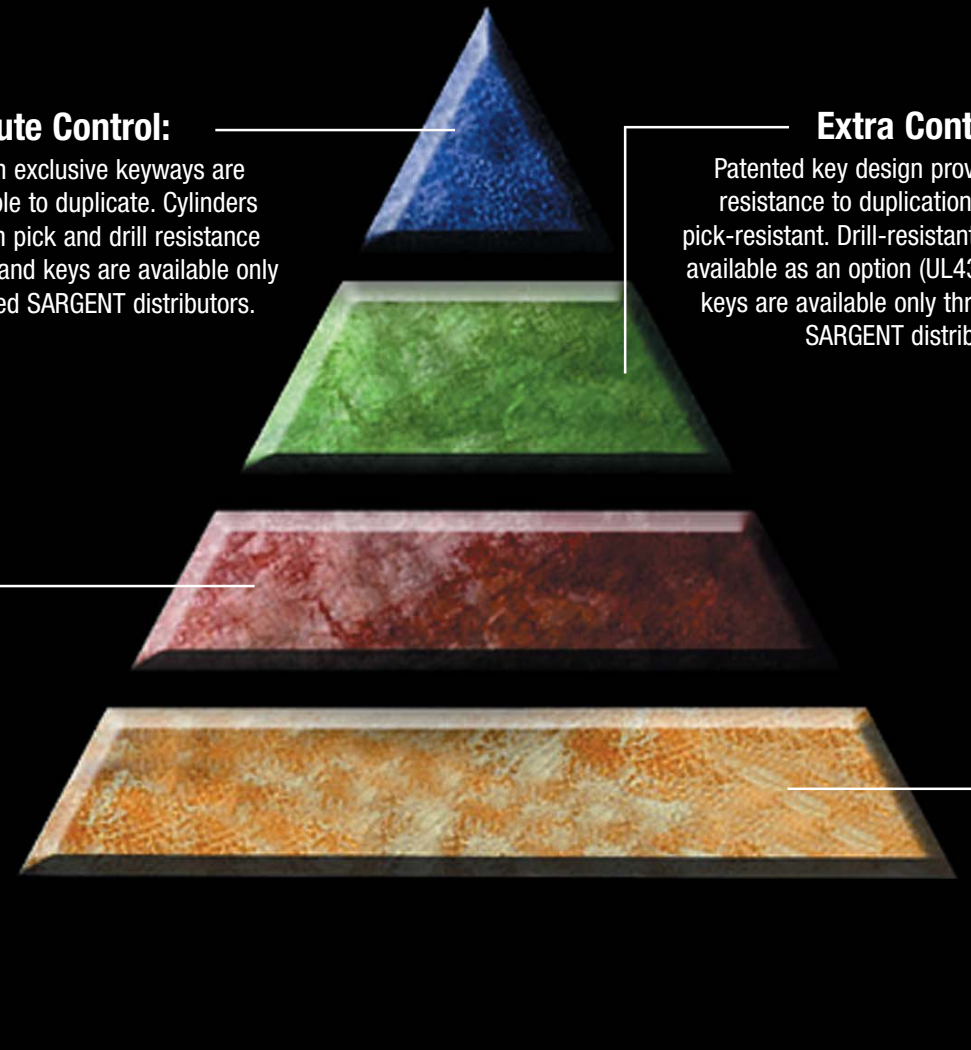

Patented key design provides additional resistance to duplication. Cylinders are pick-resistant. Drill-resistant features are also available as an option (UL437). Cylinders and keys are available only through authorized SARGENT distributors.

### Intermediate Control:

Unique key design and cylinder construction resists unauthorized duplication and entry.

### Limited Control:

Minimal key control is dependent upon the key management system.

# Cylinder & Key Control Systems

## SARGENT ASSA V-10™

Patented key design and exclusive end-user keyways offer maximum protection against unauthorized key duplication and the highest level of control currently available. V-10 cylinders meet UL437 standards for pick and drill resistance. Cylinders incorporate a dual locking mechanism with coded side bar and specially designed stainless steel pins to thwart picking attempts. Rim, mortise and cylindrical lock cylinders are available to retrofit most popular brands of commercial hardware and are field serviceable.

### Patented Key Control.

Available in removable core.

## Keso F1 UL437

Keso F1 provides a maximum level of control with a unique six-sided key design. Keso F1 UL437 cylinders meet UL437 standards for pick and drill resistance. The dimpled key requires sophisticated key-cutting equipment. The unusual cylinder with 3 banks of pins is extremely pick-resistant and allows for multiple levels of masterkeying with no loss of security. While maintaining the 3 banks of pins, the Keso F1 product adds an additional dimpling dimension to the key blank offering a greater range of both change and master key combinations. This greatly expands its master keying capabilities to both new and existing end users. The Keso F1 is backward compatible to the original Keso Systems.

### Patented Key Control.

Available in removable core.

## Keso F1

Keso F1 offers existing Keso users the opportunity to regain the security of patent protection for their locking systems. Offers all the same features of the Keso F1 UL437 version without the additional pick and drill resistant features. Perfect for doors where physical attack is not as critical.

### Patented Key Control.

Available in removable core.

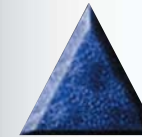

## Signature and Signature UL437

Extra security, exclusive end-user pattern and patented key control are the main benefits of the Signature Series. The patented key design provides additional control over unauthorized key duplication, while the cylinder's unique design resists attempts at manipulation. The Signature feature is offered in the majority of SARGENT keyways to provide a perfect solution to upgrading the level of control in an existing masterkey system. Signature cylinders that retrofit into almost any SARGENT lockset as well as most commercially available brands of mortise locks and exit devices, are field serviceable.

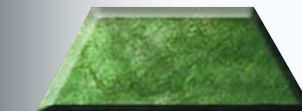

### Patented Key Control.

Available in removable core.

Optional UL437 Series offers drill-resistant features.
